Prescription Medication Emergency Preparedness

How to prepare your medications for an emergency so you can decrease the risk of a life-threatening situation.

1. **Make a list.** Keep a list of all your medications and the dosages in an emergency kit. Make sure you have the phone numbers for your doctors and pharmacies.

2. **Have your card.** Keep your health insurance or prescription drug card with you at all times so your pharmacy benefits provider or health insurance plan can help you replace any medication that was lost or damaged in a disaster.

3. **Order early.** During and after a disaster you may not be able to get your prescriptions refilled. Refill your prescription as soon as you are able so you can set aside a few extra days’ worth in an emergency kit.

4. **Storage matters.** Keep your medications in labeled, child-proof containers in a secure place that does not experience extreme temperature changes or humidity. Don’t forget to also include nonprescription medications you might need, including pain relievers, cold or allergy medications, and antacids.

5. **Rotate the date.** Don’t let medications in your emergency supply kit expire. Check the dates at least twice every year.

6. **Prioritize critical medicines.** Certain medications are more important to your health and safety than others. Prioritize your medications, and make sure you plan to have the critical medications available during an emergency.

7. **Communicate a plan.** Talk to your doctor about what you should do in case you run out of a medication during an emergency. If you have a child who takes a prescription medication, talk to their daycare provider or school about a plan in case of an emergency.

8. **Plan ahead.** Make sure you know the shelf life and optimal storage temperature for your prescriptions, because some medications and supplies cannot be safely stored for long periods of time at room temperature. If you take a medication that needs to be refrigerated plan ahead for temporary storage and administration in an emergency situation.

9. **Check before using.** Before using any medication in your emergency kit, check to make sure the look or smell hasn’t changed. If you are unsure about its safety, contact a pharmacist or healthcare provider before using.

10. **Missed Doses.** If you miss doses of your medication, contact a pharmacist or healthcare provider as soon as possible. Never take additional doses to make up for those that have been missed.
